

Project Experience Infrastructures

Project information

location	Coastal installations Norway	<p><i>Norway has the world's longest coastline and many navigation installations only accessible by boat or helicopter, so limited access time. Together with often harsh weather made traditional coatings unworkable. MCU-Coatings was chosen due to the surface tolerance and wide applications of weather acceptability, such as no humidity or dew point and also possible to apply as low as -15°C.</i></p> <p><i>During this period 100's of light houses were done along the coast.</i></p> <p><i>Corrosion category: C5M</i></p>
client project	Norwegian coast guard Coastal Navigation Lighthouses and buoys	
climatic conditions	Northern and arctic	
substrate	WJ 2 and St 3	
surf. preparation	Sa 2	
System	MCU-Miozinc MCU-Miozinc MCU-Topcoat
