

Project Experience Marine

Project information

location	at sea – riding crew
client project	MV Bergersen Havglimt Ballast tank
climatic conditions	
substrate	ballast tanks
surf. preparation	WAB 6M
System	MCU-Miozinc MCU-Clearcoat MCU-Clearcoat

Above right picture is showing the after part of Wing Ballast Tank 4 port. You can see the slopping plate, longitudinal, tank top plating, vertical stiffeners, etc. painted with epoxy system, 2 coats. In the right part you can see the aft (heated) bulkhead painted with MCU-Coatings in 2 coats. The coats were applied almost 1 year ago by paint rollers and brushes. The surfaces were prepared perfectly – 100% water abrasive blasted. The difference between qualities is evident – (right has no corrosion spots).
