

Project Experience Marine

Project information

location	Oslo, Norway
client	JP Pederson & Sons
project	Cargo Hold painting
substrate	Gates and cylinders
surf. Preparation	UHP & Sa 2 & St 3
system	MCU-Miozinc MCU-Mastic

MCU-Coatings was used for more than three years in the cargo holds of MV Elbe Ore. The Fleet Manager was very pleased with the application characteristics and the performance of MCU-Coatings. There was also a significant reduction of waste and no hold up for any climatic reasons as compared to other coatings they used. The long term corrosion protection, adhesion and abrasion resistance has proven to be excellent. The cargo is principally iron ore and coal, which is very aggressive in terms of abrasion. MCU-Coatings is currently being used on several M/V: Igloo Norse, Elbe Ore and Havglimt!
