| <b>system</b>              | MCU-Miozinc<br>MCU-Miomastic<br>MCU-Topcoat |

*This well-know classic ship became famous as the first unofficial radio-broadcasting from offshore. Radio Veronica was an offshore radio (pirate) station that began broadcasting in 1960, and broadcast for over fourteen years. It was set up by independent radio, TV and household electrical retailers in The Netherlands to stimulate the sales of radio receivers by providing an alternative to Dutch's state-licensed stations in Hilversum.*

*The original radio Veronica became the most popular station in The Netherlands. It broadcast from a former trawler, the MV Norderney .*
